Academic positions

Research Fellow **2024-Now**
University of Bologna, Italy
Supervisor: G. Cavaliere

Education

PhD in Economics **2024**
University of Bologna, Italy
Advisors: M. Gonzalez-Eiras, M. M. Croce

Visiting Student at *London Business School,* UK 2022-23
Sponsor: H. Kung
Courses: Asset Pricing (audit), Empirical Finance (audit)

Visiting Student at *Bocconi University,* IT (Virtual) 2020-21
Sponsor: M.M. Croce
Courses: Advanced Topics in Asset Pricing (A+), Applied Asset Pricing (audit), Econometric Methods for Finance and Macroeconomics (A-)

Visiting Student at *Vienna Graduate School of Finance,* AT (Virtual) 2020
Sponsor: C. Wagner
Courses: Asset Pricing (audit)

MSc in Advanced Economics and Finance **2018**
Copenhagen Business School, Denmark
Thesis: "Intermediary Asset Pricing and Betting Against Beta"

Credit Student at *University of Copenhagen (DIKU),* DK 2017
Courses: Machine Learning, Natural Resources Economics

BSc in Business Administration **2016**
University of Bologna, Italy
Thesis: "How the financial sector's development affects real growth"

HSD in Mechanical Engineering **2013**
I.I.S. Aldini Valeriani, Italy
Final dissertation: "Money"

Teaching experience

Teaching Assistant

Asset Pricing (Grad), TA to G. Camera and M. Eiras 2021-26
University of Bologna, Italy

Financial Econometrics (Grad), TA to G. Moramarco and M. Balduini 2024-26
University of Bologna, Italy

Financial Economics (UGrad), TA to G. Camera 2020
University of Bologna, Italy

Macroeconomics 2 (UGrad), TA to A. Sørensen 2018
Copenhagen Business School, Denmark

Academic service

Refereeing

Ecological Economics, Economic Modelling

Organization

Organizer of the Reading Group in Macro-Finance 2019-21
University of Bologna, Italy

Representation

Representative of Research Fellows in the Council of Department 2024
University of Bologna, Italy

Sole representative of PhD Students in the Council of Department 2019-22
University of Bologna, Italy

Memberships

Italian Financial Economists Association 2025-Now

Grants and honors

"INFER Young Economist Award" – Finalist, INFER Annual Conference	2025
"Marco Polo Mobility Scholarship", University of Bologna	2022-23
"PhD Scholarship", University of Bologna	2018-23
"Er.Go Scholarship", Regional Authority for the Right to Higher Education	2013-16
"Best laboratory report", Laboratory of Excellence 'Aldini-Ducati'	2012

Professional Experience

Research Assistant — 2017
Copenhagen Economics A/S, Denmark

Planning and Control Intern — 2014
Bologna Local Health Authority, Italy

Relevant IT skills

Advanced: LaTeX, R
Basic: Matlab, Python, MS Excel, Stata, MS Access

Working papers

The Innovation Long-Run Risk Component

This paper provides robust empirical evidence that shocks to aggregate Research and Development (R&D) have persistent effects on macroeconomic dynamics and represent a significant risk for investors, as predicted by the "long-run risk" literature. The analysis focuses on a single variable, "effective R&D", which captures the entire contribution of R&D to productivity growth, flexibly accounting for knowledge spillovers and product proliferation effects. Deviations of effective R&D from its equilibrium level can be empirically identified leveraging the error correction term in the cointegration relationship among R&D, total factor productivity, and the labor force. In US data, structural effective R&D shocks affect productivity and consumption growth rates beyond business cycle horizons and are associated with a significant risk premium in a cross section of stock and bond portfolios (around 2% annually), with cash-flow sensitivities proving a key determinant.

Does CAPM Overestimate Risk or Its Price More?

Empirical returns systematically depart from CAPM predictions, with deviations declining in asset betas. This paper decomposes this pattern into mismeasurement of risk and the risk premium, using a framework that accounts for leverage constraints and multiple risk factors. This spans and generalizes two previously separate explanations of the anomaly, showing how bid-ups for high-risk assets arise from funding tightness in the presence of risks beyond market exposure. Crucially, even with binding constraints, any factor model can be expressed as a single aggregate risk measure multiplying the expected market return. Funding tightness and exposure to omitted risks are then demonstrated to offset each other in explaining the beta-related departures, with their relative contributions quantifiable. GMM estimates show both channels are significant, with omitted risks accounting for a slightly larger share, and the spread generated by funding tightness at around 2% per year.

Are You Betting On Sustainability?

When the sustainability of assets is priced, its impact on discount rates depends not only on the asset's sustainability but intrinsically also on its risk profile. This has implications often overlooked in portfolios used to assess the sustainability premium or to hedge sustainability-related shocks. Specifically, the average returns of sustainability-sorted long-short portfolios are shaped by the risk profiles of their components, even when the portfolio is risk-neutral, which also affects the portfolio's sensitivity to shifts in sustainability concerns. Using Refinitiv ESG scores for US stocks, a weak sustainability premium is observed, whose significance differs importantly from that of the plain long-short portfolio returns.
