Education

PhD in Economics **2024**
University of Bologna, Italy
Advisors: M. Gonzalez-Eiras, M. M. Croce

Visiting Student at *London Business School*, UK 2022-23
Host: H. Kung

Health-related leave (May 2021 – Mar 2022)

Visiting Student at *Bocconi University*, IT (Virtual) 2020-21
Host: M.M. Croce
Coursework: Advanced Topics in Asset Pricing (A+),
Econometric Methods for Finance and Macro (A-)

Visiting Student at *Vienna Graduate School of Finance*, AT (Virtual) 2020
Host: C. Wagner

MSc in Advanced Economics and Finance **2018**
Copenhagen Business School, Denmark

Credit Student at *University of Copenhagen (DIKU)*, DK 2017
Courses: Machine Learning, Natural Resources Economics

BSc in Business Administration **2016**
University of Bologna, Italy

HSD in Mechanical Engineering **2013**
I.I.S. Aldini Valeriani, Italy

Academic positions

Research Fellow **2024-2025**
University of Bologna, Italy

Job Market Paper

The Long-Run Risk of Carbon Emissions and Its Price

This paper provides evidence that shocks to global greenhouse gas emissions affect global macroeconomic dynamics at long horizons and constitute a significant source of risk for investors. Emissions shocks are identified as innovations to global radiative forcing, net of economic activity and temperature dynamics, using the stationary component of the energy imbalance, which is known to drive long-horizon temperature forecasts. These shocks have effects on global output and consumption that materialize beyond business-cycle horizons. Together with the significantly negative risk premium associated with emissions risk across a broad set of test assets spanning multiple asset classes and geographical regions, this provides evidence that emissions constitute a source of long-run risk. This asset-pricing evidence, in turn, allows us to exploit information embedded in financial markets to assess the social cost of carbon, yielding estimates ranging from $50 to $300/tCO2.
